## VIX Up 40\% In 2 Days

The VIX volatility index, otherwise known as the "fear index," has soared over the past two trading days as US equity markets have pulled back. On Monday, the VIX was at 21.13, and at the moment it is at 29.74 , representing a gain of more than $40 \%$.
Since 1990, there have been 24 prior instances in which the VIX rose more than $30 \%$ over a 2 -day period. At right we highlight the performance of the S\&P 500 on the next day, over the next week, and over the next month following these 2-day surges in the VIX.

As shown, the average performance of the S\&P on the next day has been a solid $+0.69 \%$ with positive returns $71 \%$ of the time. Over the next week, the average return is $+0.17 \%$ (median 0.08\%) with positive returns $54 \%$ of the time, and over the next month, the average turns negative to $-1.03 \%$ with positive returns 56.5\% of the time. Based on past instances, the index may be due for a short term rally over the next day or week, but the next month could be dicey.
We also shade in gray the times the
